OXSA SB - SNOW BUCKET SERIES

High-quality snow bucket series for demanding use

OXSA SB - series starting point for the design has been the balancing of its structure and weight, as well as the optimization of ease to use and efficiency. Thanks to years development and thorough testing carried out in the Finnish winter, its torsional stiffness, the non-drifting shape and effortless filling and emptying are its trump cards, which distinguish the OXSA SB series from its competitors.

In the buckets of the SB series, **S355J2G3 structural steel is used as the base material** and **20 mm thick and 200 mm wide HB500 special steel as the lip plates in all models.**

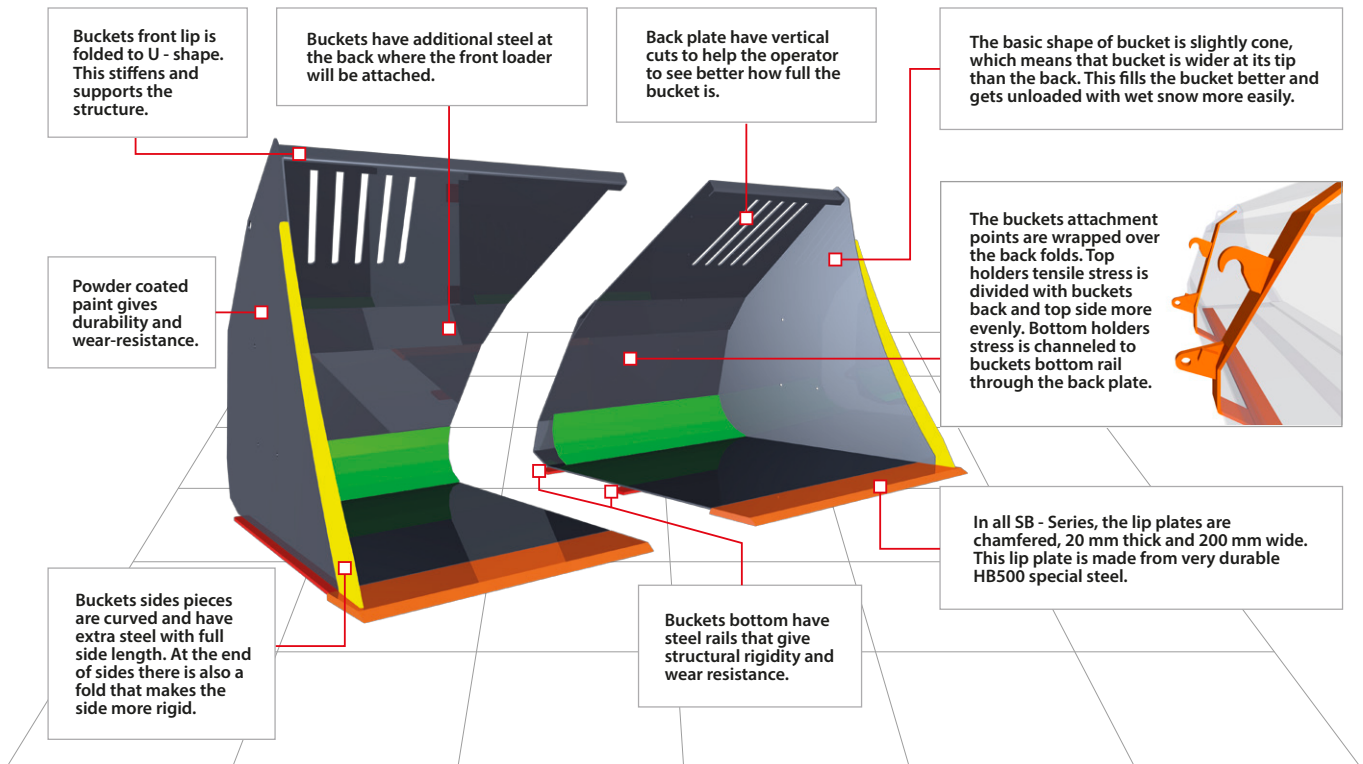

AVAILABLE LOADER ATTACHMENTS

All loader attachments used in Finland are available for OXSA SB-series.

- Euro
- Vila / Valtra
- Trima / MP-lift
- Isme
- Solid / Pehtoori
- Älö

SB - SNOW BUCKET SERIES PROPERTIES

Model	Width (mm)	Height (mm)	Depth (mm)	Volume (litres)	Weight (kg)	Loader Attachment
